Support service in the provision, configuration, operation, and maintenance of systems hardware and software.

Managed Services

A complete set of services based on the following approaches

❖ Proactive problem solving

❖ Data protection and recovery

❖ Performance enhancements

❖ Innovation

❖ Cost reduction

What our customers say about us

"I said to Dell that we wanted a partner that was technically driven." Dell recommended Constor Solutions.

People like ourselves have a somewhat limited capacity to go out to the market and talk to everybody, to explain our challenges. What benefited us with Constor was that rather than telling us straightaway 'you should do this', instead they listened."

Darren Carey
Group Technical Services Manager
Fyffes

"I've had the pleasure of working with Constor for over two years now and I have found their technical experience and professional resources in support of our managed services contract second to none. They always go that extra mile to help me and my team.

If you are looking for a customer focused and technically experienced company to help you with your IT Infrastructure, then Constor are the guys you need to talk to."

Vei Ho
Infrastructure Manager
Kuwait Investment Office

"We have started what I expect to be a long and healthy partnership. Not sure how you do it but you do make us feel very supported and we are a key client even though I know you are doing so much with so many other clients. This is a great asset of your company philosophy and I hope you maintain it as you grow as a company and get bigger and bigger.."

Martin Gillon
Head of Technical Operations
Howdens Joinery Group
